PREFABRİK KONUTLAR / Prefabricated Houses

- Talebe ve coğrafi koşullara uygun tasarlanmış, uzun ömürlü, hızlı, ekonomik ve yüksek kalitelidir.
- Duvar panelleri içinde profil karkas gerektirmediğinden ısı köprüsü oluşturmamaktadır.
- Hızlı montaj özelliği ile şantiye kurulumunda zamandan tasarruf sağlamaktadır.
- Defalarca montaj ve demontaj özelliğine sahiptir.
- Elektrik ve Sıhhi Tesisat : Talebe, kullanım amacına ve mimari ihtiyaçlar göz önüne alınarak en efektif çözümler yapılarda uygulanmaktadır. 1. Sınıf malzeme kullanılmaktadır.
- Aksesuarlar : Mobilya (yatak, ranza, masa, dolap vb.), mutfak ekipmanları (tezgah, buz dolabı, bulaşık makinası vb.), aksesuar (klima, duman algılama cihazı vb.), kalorifer tesisatı ve boruları vb. olarak ihtiyaçlarınızı tamamen karşılama seçeneğiniz mevcuttur.
- Prefabricated Houses are designed according to the demand and geographical conditions, therefore there are durable, fast, economical and high quality.
- Does not form a heat bridge, because there are no carcassed profiles needed inside the wall panels.
- Fast building system is saving on time.
- Repeated mounting and dismounting feature
- According the decisions and architectural needs it is giving the opportunity to achieve the most effective solutions for the electricity and plumbing.
- Several alternatives for fulfillment of needs at the accessoires like furniture, kitchen equipments, heating system, pipes, etc.

MERAK EDİLENLER / About Prefabricated Houses

Neden Prefabrik?

Prefabrike yapıların tercih sebepleri gelişen üretim teknolojileriyle sürekli artmaktadır, bunun yanı sıra adından da anlaşıldığı üzere modüler yapıda olan Prefabrik Yapılar her yerde (dağda, ovada, deniz kenarında hatta yaylada) kullanılabilir.

Prefabrik Yapıların Avantajları Nelerdir?

Prefabrik yapılar ekonomiktir, birçok kalıp malzemesinin yerine tek kalıpla yüzlerce mamul alınmaktadır, buda kalıp maliyetini büyük oranda azaltmaktadır. Ayrıca bu sayede üretim zamanı kısa, verimlilik ve kalite yüksektir. Prefabrik yapılarda kullanılan sıkıştırma tekniği, betondaki havaları alarak yoğunluğunu artırmaya yarar. Bu yöntemde betonun su emme oranını azaltarak donma çözünmede deformasyonu engellemektedir ve daha sayılmayacak kadar çok faydalar sağlamaktadır.

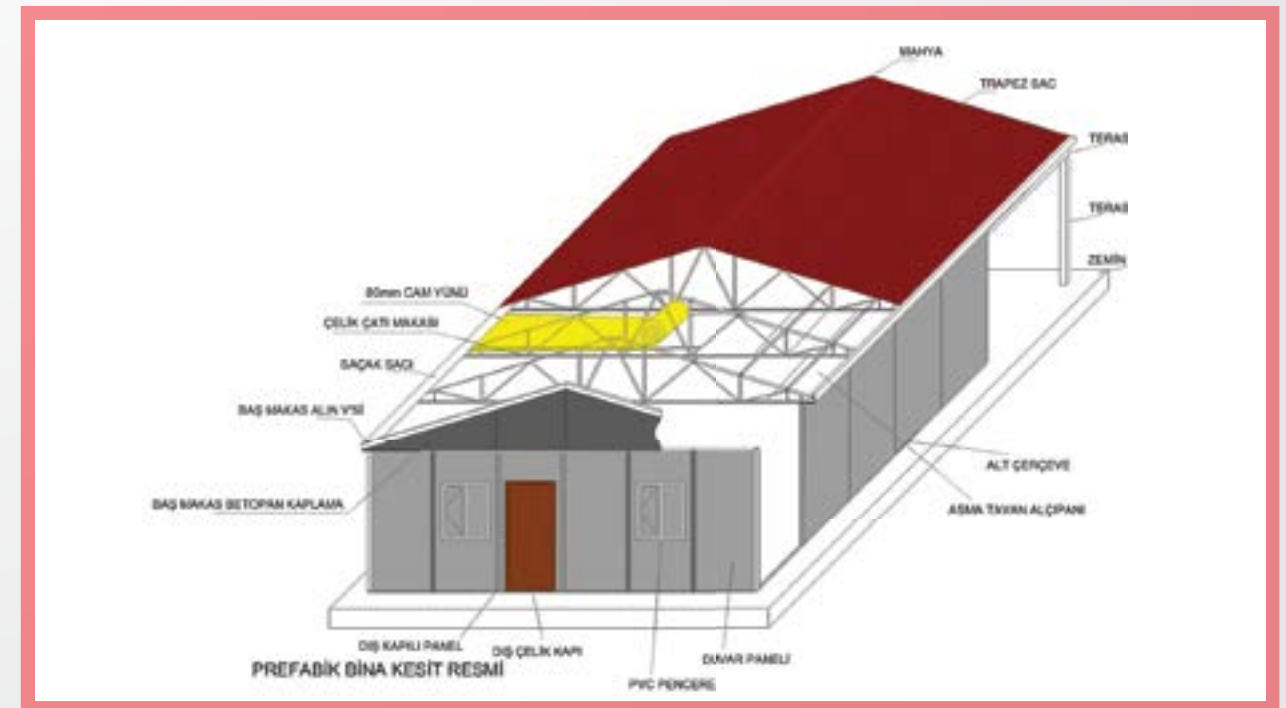

• Why Prefabricated Houses?

Preferable reasons of Prefabricated Buildings are constantly increasing with developing production technologies. Besides, as understood from its name Prefabricated Buildings, which have the modular structure, can be used everywhere.

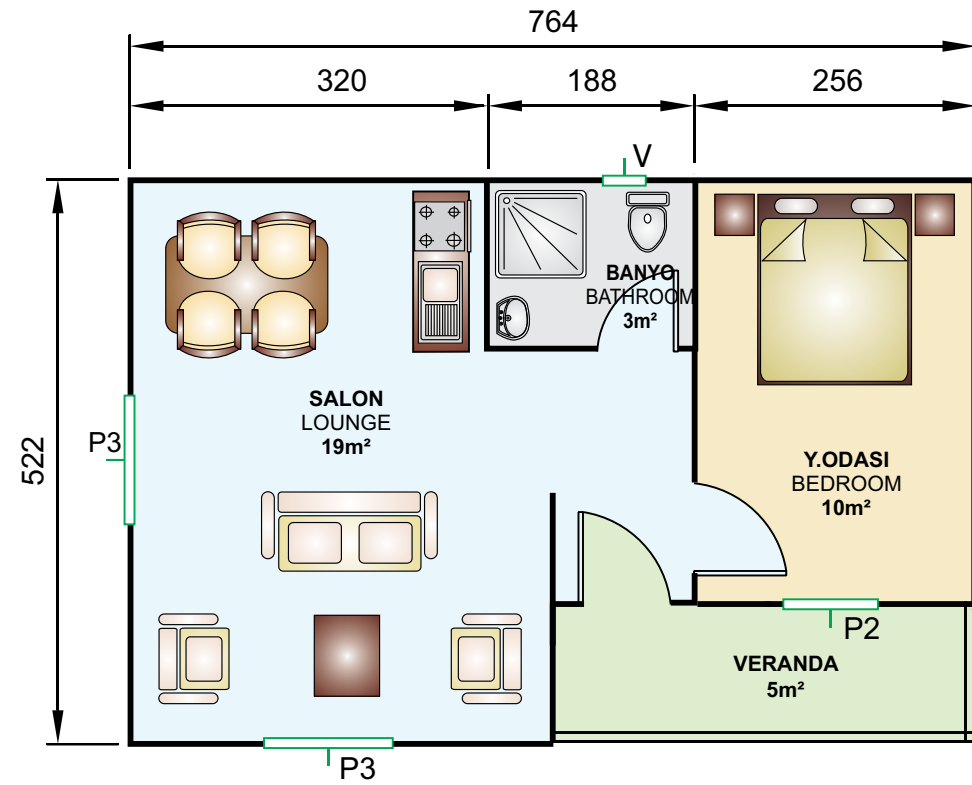

• What are the advantages of Prefabricated Houses?

Prefabricated structures are economical, instead of using several molds, like in concrete houses, it can be replaced with a single mold, which is also greatly reducing your cost. Reducement of installation time with achievement of high quality at the same time.

The compression technique used in prefabricated structures increases the density by taking the air from the concrete. By reducing the water absorption rate of concrete, it prevents deformation in freezing and provides much more benefits.
